Submitteed (SEP-2001) to the BMBL/Genbank/DDBJ databases.
-1-Tissub SPECIFICITY: FOUND IN SPOROPHYTIC AND GAMETOPHYTIC CELL
TYPES IN THE ANTHER, ONLY IN MALE FERTILE PLANTS.
-1-DEVELOPMENTAL STAGE: EXPRESSED IN MALE GAMETOGENESIS, DURING
MICROSPORE BYELOPMENT, HIGHER EXPRESSION IS FOUND DURING
MICROSPORE MITOSIS WITH A DRAMATIC DECLINE DURING POLLEN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pal G, Peterson J., Pham P.K., Rizzo M., Rooney T., Rowley D., Sakano H., Salzberg S.L., Schwartz J.R., Shinn P., Southwick A.M., Sun H., Tallon L.J., Tambunga G., Torlumi M.J., Town C.D., Utterback T., Van Aken S., Vaysberg M., Vysotskala V.S., Walker M., Wu D., Yu G., Fraser C.M., Venter J.C., Davis R.W.; "Sequence and analysis of chromosome 1 of the plant Arabidopsis

A cosmid library was constructed by transforming E.coli HB101 with recombinant cosmids prepared by partial digestion of B.parapertussis chromosomal DNA with Sau3A and cloning of 40-50kb fragments into the BamHI site of cosmid pBC79. The cosmids were screened with a 1.8kb clai fragment from the pro gene of B.pertussis. The insert from one positive colony, harbouring cosmid pBD811, was sequenced and found to contain an open reading frame encoding a 922 amino acid protein with calculated mol.wt. 95.177. This precursor protein ("P95") is processed in vivo to the P70 antigen of apparent mol. wt. 70,000 as determined by SDS-PAGE, but with actual mol.wt. 61kD. Antigenic fragments of the protein will be useful in developing an acellular vaccine against B.parapertussis. Preferred fragments include amino acids Pro577 to Pro612 or Ala574 to Pro612.
                                                                                                                                                                                                                                                                                                                                                           Location/Qualiflers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antigens in biological preparations or in purifying corresponding proteins, qlycoproteins or their mixtures when used in affility chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal tissue and human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. parapertussis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Pichia microorganisms are transformed for the expression of pertactin antigens. DNA sequence used are represented in AAQ14319-20 encoding the B. bronchiseptica P.68 and B. parapartussis P.70 antigen respectively or the B. pertussis P.69 encoding sequence described by I.G. Charles et al. Proc. Natl. Acad. Sci. USA, Vol. 80:3354-3448 (1989).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 GAKVPPAPKPAPQPGPQP-PQPPQPPQPPQPQPQPQPEAPAPQPPAGRELSAA 54

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to Bordetella bronchiseptica pertactin (outer membrane protein) or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antigens in biological preparations or in purifying corresponding proteins, 91ycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens to identify antibodies to Bordetella in materials such as human or other animal cells, as well as blological fluids, such as human or other animal cells, as well as blological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the antigens can be used for qualitative or quantitative determination of Bordetella in a material. The present sequence is B. bronchiseptica
                                          B. bronchiseptica strain II-2 pertactin outer membrane protein region II.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions for treating infections caused by Bordetella and in diagnostic methods
                                                                                      Pertactin; PRN; outer membrane protein; vaccine; Bordetella infection; therapy; antibiotic; antibacterial; region II.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     4;

Courter membrane protein or their fragments. Pertactin (PRN) is used as vaccine. Pertactin antibody is useful for treating Bordetella infections and used to detect Bordetella antiquens in biological preparations or in purifying corresponding proteins, glycoproteins or their mixtures when used in affinity chromatographic columns. Pertactin is useful as antigens and infinity chromatographic columns. Pertactin is useful as antigens and infinity chromatographic columns. Pertactin is useful as antigens and infinity chromatographic columns. Pertactin is useful as antigens and all tissue and human or other animal cells, as well as biological fluids, such as human or other animal body fluids, including human sera, and to determine the concentration of Ab in those materials. Thus the Bordetella in a material. The present sequence is B. bronchiseptica pertactin outer membrane protein, p.68.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        B. bronchiseptica strain II-5 pertactin outer membrane protein region II.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Polypeptides containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions for treating infections caused by Bordetella and in diagnostic methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Pertactin; PRN; outer membrane protein; vaccine; Bordetella infection; therapy; antibiotic; antibacterial; region II.
                                                                                                                                                                                               Polypeptides, containing polymorphisms of the repeated regions of pertactin in Bordetella species, useful in immunogenic compositions treating infections caused by Bordetella and in diagnostic methods
                                                                                                                                                                                                                                                                                                                     The present invention relates to Bordetella bronchiseptica pertactin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pertactin; PRN; outer membrane protein; vaccine; Bordetella infection; therapy; antibiotic; antibacterial; p.68.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence given is the P.94 antigen from B. bronchiseptica. The P.68 antigen is formed by alternative cleavage of this protein. P.68 is an outer membrane protein with a molecular weight of 68 kD which is associated with protection of piglets against atrophic rhinitis. The DNA sequence encoding these proteins was derived by standard recombinant DNA techniques using P.68 probes to isolate the entire P.94 sequence.
